## Resolve Spot Cleaner

This product contains Teflon stain protector. While this fluorochemical works well to “repel” soils it can also trap soils that are not completely recovered in the spot cleaning process, making further attempt to remove any contaminant more difficult. Resolve also has a reported history of causing some bleaching.

Experience has shown that the Bane Clene Company has excellent spotters (e.g.; APS and Perky Spotter) that work well on a wide range of spots. Bane Clene is also a manufacturer of cleaning equipment and chemicals, and is a major training institute in the carpet and upholstery cleaning industry (phone number 800-428-9512).
